

Aunt Goodiebags' **HyperDuino Presentation Book Kit**
 is available from Auntie's website
www.auntgoodiebags.com

You can construct a Cardboard Book from scrap cardboard
 —OR— *buy the kit and have everything ready for you!*

These are the measurements for making a book that is the same size as the one in the kit.

Here is a "real life" math problem:
 Cardboard sheets are 24" x 36"
 How many books can be cut from ONE sheet?
 How many books can be cut from TWO sheets?

The HyperDuino Presentation KIT contains:
 pre-cut and scored cardboard, full instructions, cover material,
 Velcro fasteners and Foamcore page insert.

You can decorate your Cardboard Book in lots of ways.
 Add decorative tapes and stickers to the covers, Paint the covers, Wallpaper the covers,
 Wrap fabric around the covers, Make a frame and add your artwork to the front cover,
 Use papier-mâché or Modeling Paste for texture and glue on embellishments

Check out Aunt Goodiebags' website for more ideas and examples!
